

Agentic AI — Course Curriculum

3 months · Hybrid · Certificate of completion

01 Introduction to AI

The foundations you need before building agents.

1. What is Artificial Intelligence?
2. Understanding AI Agents
3. Agent Architecture

02 LLM Fundamentals

How large language models work in practice, and how to prompt them well.

1. How LLMs Generate Text
2. Prompt Design Patterns
3. Structured Outputs
4. Working with LLM APIs

03 Building AI Agents

Tool calling, retrieval and memory — the building blocks of an agent.

1. Tool Calling
2. Retrieval-Augmented Generation
3. Memory and State
4. Building Your First Agent

04 Advanced Agent Architecture

Planning loops, multi-agent systems, evaluation and guardrails.

1. Planning and Reflection Loops
2. Multi-Agent Systems
3. Evaluating Agents
4. Guardrails and Safety

05 Capstone Project

1. Choosing a Problem
2. Build, Evaluate and Deploy
3. Demo Day
